Subject: Microsoft Settlement.

According to the Information on the United States v.
Microsoft Settlement, I think that it really take
action to control the threat of Microsoft monopoly
power. Since Windows 95 came into the computer OS
market, all the people change to their traditional OS
interface to GUI. Because of this OS popular,
Microsoft tries to extend their empire of Software.
Remember few years ago, the competition between
Netscape and Internet Explorer, which Netscape was
very popular. Internet Explorer was just very weak
online browser. And also, IE was only covered 20% on
the market. Nowadays, its already covered over 80%.
One thing, I think Microsoft is very bad OS. They
always got the security problem. Many hackers can
easy to hack in your computer which is windows OS
system. Because of this, the windows OS is prohibited
in the department of China. On the other hands I
really dont like Microsoft which is they always buy
some very powerful software, and then merge into their
software system. After that, they dont give any
support for some old customer which is very
embarrassing. And then many Microsofts software is
extremely expensive. Nobody can like it, especially
for student.
We want to use more good and powerful software, and we
dont want to use only Microsofts software. We
have to take very strong action to control the threat
of empire of Microsoft.
